

7-0-0 (7% Ammoniacal Nitrogen, 9% Chelated Zinc)

Derived from EDTA Chelated Zinc

HOW IT WORKS

MicroEdge® ZN is a highly stable, liquid micronutrient fertilizer that prevents and corrects zinc deficiencies in crops and ensures micronutrients are available to the crop at critical growth stages.

PRODUCT BENEFITS

NUTRIENT AVAILABILITY

- EDTA structure keeps zinc available and prevents it from binding with soil elements or precipitation when mixed with liquid fertilizers
- Formulated for soil and foliar applications

CROP HEALTH

- Utilizes EDTA chelation to protect nutrients before, during, and after application
- Zinc is important for starch formation and proper root development, and essential for seed formation and maturity

EASE OF USE

- MicroEdge ZN is compatible with fertilizers and crop protection products
- Labeled for use in a variety of application methods

**AVAILABLE ZINC
WHEN CROPS NEED
IT MOST**

CROPS

Corn, Soybeans, Wheat and
Cereal Grains, Alfalfa, Hay
& Forages

TIMING

Pre-plant/Pre-emerge,
In-furrow, banded &
foliar applications

USE RATE

Soil applied:
In-furrow: 1-2 pints/acre
Banded: 1 qt/acre
Broadcast: 2-4 qt/acre

Foliar applied: 1-2 pints/acre
