

PROTECT YOUR INVESTMENT AND PUSH YOUR YIELDS WITH OUR SEEDENHANCE™ PACKAGES

Add Ons: Preside Ultra

FUNGICIDE	FUNGICIDE, INSECTICIDE, & BIOSTIMULANT	FUNGICIDE, INSECTICIDE, & BIOSTIMULANT PLUS SALTRO®
PROTECT your seed with a four modes of action, full fungicide program.	PUSH your seed and crop yield potential with the most complete fungicide, insecticide, biostimulant, and micronutrient seed treatment package.	ULTIMATE protection and performance for your beans while maximizing your yield potential.
HOW IT WORKS SeedEnhance Basic™ protects against soil and seed-borne fungal pathogens, including early season Phytophthora, Pythium, Rhizoctonia Solani, and Fusarium, with a four modes of action fungicide to increase emergence and stress mitigation in cool, wet conditions.	HOW IT WORKS SeedEnhance Plus™ pushes emergence and early season vigor with a four modes of action fungicide, a proven insecticide, the plant-based CropPWR™ biostimulant technology, and a micronutrient nutrition finisher for stronger plant stands and enhanced root growth for an accelerated start to your growing season.	HOW IT WORKS SeedEnhance Premium™ provides the ultimate protection for your beans. All the benefits of SeedEnhance Plus with the extra protection provided by Salstro® Fungicide (powered by ADEPIDYN® technology, a revolutionary SDHI mode of action).
PRODUCT BENEFITS - Broad spectrum control with a unique combination of systemic fungicide and contact fungicide - Provides protection from soil and seed-borne fungal pathogens	PRODUCT BENEFITS - Controls thrips, aphids, and soil pests - Controls wireworm, white grub, and seed corn maggot - Suppression of overwintering bean leaf beetles - Suppression of early aphid infestations - SDS Control - Early season stress mitigation - Enhanced seedling vigor - CropPWR technology assists with promoting crop health and increasing yield potential - Increased flowability and handling as well as micronutrient delivery for your seed	PRODUCT BENEFITS - All the benefits of SeedEnhance Plus - Upgraded SDS protection - Increased protection against Soybean Cyst Nematode and Red Crown Rot - Reduced seedling plant stress - Enhanced root growth - Higher yield potential - CropPWR technology assists with promoting crop health and increasing crop performance - Increased flowability and handling as well as micronutrient delivery for your seed for early season development

WHAT IS CropPWR™ TECHNOLOGY?

CropPWR technology is a Landus proprietary biostimulant (plant extracts derived from Ecklonia Maxima) designed to boost crop performance and yield potential. CropPWR regulates and enhances crops physiological processes for improved yields and quality.
